INTERFAITH MEDICAL CENTER

PROJECT SUMMARY

Business: Interfaith Medical Center

Business Type: Hospital

Location: Brooklyn, NY

Interfaith Medical Center is a 287-bed teaching hospital located in Brooklyn, New York that services approximately 11,000 inpatients, 200,000 outpatients, and 50,000 emergency room visits annually. The hospital required a comprehensive lighting system upgrade to replace their outdated system, improve occupant comfort, and increase overall operational efficiency.

Working under crunching time constraints, IoEnergy demonstrated its technical acumen by designing a LED lighting upgrade for the entire hospital that was installed in just three weeks. The project, which included 3,800 fixtures was completed during the Covid-19 outbreak, with zero interruptions to hospital operations or impact on patient care.

"This was a deadline-driven project that required a high level of execution and close attention to detail. We had to overcome the hurdles of a three-week installation window, a global pandemic, and the need to get the job done without any disruption to hospital operations. Our crews really stepped up and did an amazing job."
