

PROJECT SCOPE

12 Projects

Throughout the US

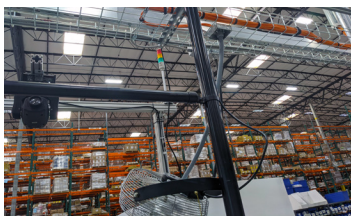

3,197 Fixtures

1.9 Million Square Feet of
Completed Upgrades

RESULTS

\$873,036.08 Cost Savings

Improved General Visibility
and Occupant Comfort

IOENERGY DELIVERS IMPROVED SAFETY, COST SAVINGS & ENERGY EFFICIENCY TO GXO FACILITIES NATIONWIDE

PROJECT SUMMARY

Business: GXO Logistics

Business Type: Global Contract Logistics

Location: Multiple US Locations

IoEnergy has been a GXO facility retrofit partner since 2017. In that time, we've upgraded the lighting for approximately 1.9 million square feet of GXO workspace. While the primary objective has been to lessen lighting maintenance while improving workplace safety and occupant comfort, these upgrades have, by default, also resulted in increased operational efficiency and lowered energy costs.

Through our years of working with GXO, we've developed a comprehensive understanding of their facility portfolio and what is possible through strategic lighting retrofits in terms of safety, savings, and efficiency. This knowledge helps us roadmap maintenance and comfort upgrades that can improve GXO's sustainability profile, while driving down costs.

"With energy efficiency becoming more and more of a national priority, there are a lot of new names in the industry. The IoEnergy team has been in the lighting efficiency business since its inception, and we have years of demonstrated capability. Our relationship with GXO is just one of many examples of our ability to deliver quality, reliability, and expertise for large, multi-site clients."
