

Electrical Vehicle Charging Station Solutions for the Hospitality Industry

As California Goes Electric, Hotels & Restaurants Will Be a Vital Part of the EV Charging Ecosystem

Meet ESG Goals While Providing a Value-Added Service to Your Team

As the focus on sustainable business practices becomes ever more important to shareholders, employees and customers, EV charging station installation is one more way your business can demonstrate its commitment to meeting its ESG goals.

- Installing EV charging stations is a visible demonstration to the ESG commitment.
- Visitors benefit from this investment and will likely come to expect EV charging stations as a standard amenity in the future.
- On-site EV charging as part of employee compensation packages can be used as an incentive to draw in the hospitality industry's top talent.

Be Prepared – Both Guests and Staff Will Soon Expect EV Charging!

The switch to electric vehicles is underway, and California businesses are on the front lines of an infrastructure shift that will result in parking lot charging becoming standard. Federal, state and utility sponsored incentives are now available to help hotels, restaurants, theme parks and other travel/tourist destinations install the EV charging station equipment required to support this change. To take advantage of these funds, the time to act is now.

IoEnergy are energy-efficiency experts with decades of experience in the planning and execution of large-scale electrical infrastructure projects.

As experienced electricians and energy efficiency experts, we help our clients with planning, funding, ADA compliance and installation. Our projects begin with site audits to determine if other site efficiency upgrades can offset the cost of the EV charging station installation. This ensures that you get the EV charging solutions you need, while also keeping more of your capex budget for other improvements.

Leverage Energy Efficiency Projects to Finance Charging Station Infrastructure

As energy efficiency architects, IoEnergy is uniquely positioned to help design a charging station plan that considers all aspects of your site's energy use profile.

We will perform a comprehensive energy audit and determine if there are efficiency opportunities that can offset the cost of charging station implementation.

We will provide load calculations based on your existing systems and provide "good, better, best" options for delivering as many Level 2 charging stations as possible to help you meet the needs of your facility and your team –today, tomorrow and five years from now.

We will create implementation plans that make the most efficient use of space and result in minimal impact on the environment and your site.

The Time is Now—Federal, State and Utility-Backed Funding Won't Last Forever

Let IoEnergy do the work of tracking down and applying for all available funding opportunities. With years of experience as energy efficiency implementation partners, we know how to navigate the paperwork and the systems to get every possible dollar for our clients.
